Profile Summary

Full-Stack Software Developer with strong experience building **scalable SaaS applications** and **enterprise-grade backend systems** using **Java, Spring Boot, React.js, Next.js, Node.js, MongoDB, React Native**, and **AWS**. Proven ability to design **secure payment systems**, implement real-time and **AI-powered features**, and deliver **production-grade web and mobile platforms**. Proficient in **REST API development, Spring Security, CI/CD pipelines, React Native & Expo mobile development**, and cloud-native deployments. Active **open-source contributor** with multiple merged pull requests across community projects and a track record of delivering **high-impact solutions** in real-world environments.

Work Experience

Software Developer DeepNeurons.ai Certificate Link	Apr (2025) – Oct (2025)
- Built and deployed a full-stack application (React + Node.js) on AWS, serving 500+ users. - Implemented secure authentication and API key management, improving system security by 40%. - Automated CI/CD pipelines, reducing deployment time from hours to <15 minutes.	
AI Intern (Google TensorFlow Program) SmartInternz GitHub Link	Jun (2024) – Jul (2024)
Gained exposure to Python-based ML workflows using TensorFlow, with hands-on project deployment on GitHub.	

Projects

Echo Owl - Live Link
- Architected and shipped a production-grade SaaS application using Next.js (App Router) and TypeScript, following scalable frontend and backend design patterns. - Designed and implemented real-time event monitoring and notification pipelines using Discord APIs, backed by a high-performance serverless backend built with Hono and Prisma ORM. - Integrated subscription-based billing and payment workflows using Stripe, and built a responsive monitoring dashboard with shadcn/ui, Radix UI, and Tailwind CSS.
Mystery Messages - Live Link
- Built a secure anonymous messaging app with Next.js and MongoDB, enhanced with an AI-powered twist (Gemini AI). - Secured via NextAuth.js with Resend email verification, ensuring 100% secure onboarding. - Optimized performance with MongoDB Aggregation, TypeScript, and ZOD, while boosting UX with dedicated inboxes and instant toast notifications.
Stream Sphere - Version 1 Version 2
- Developed a full-stack streaming platform with the MERN stack, featuring secure authentication and dynamic content management. - Delivered core features: video upload, viewing, likes, comments, playlists, and channel subscriptions. - Integrated Stripe payments to enable premium memberships for exclusive content access and creator support.

Re-architected application backends using **Spring Boot** and **Spring Security**, implementing scalable, production-ready **Java microservices**. Currently building cross-platform **mobile apps** for these projects using **React Native** and **Expo**.

Skills

Languages: Java, JavaScript, TypeScript, Python, R, C/C++ Frameworks & Technologies: Spring Boot, Spring Security, React.js, React Native, Node.js, Express, MongoDB, Next.js, Expo Tools & Libraries: Git, GitHub Actions, Postman, Stripe, AWS, Vercel, Render, Prisma, Resend, Zod, Socket.IO Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), REST APIs, CI/CD

Education

Vellore Institute of Technology (VIT) — <i>Btech in Computer Science with Business Systems</i>	2022 - 2026
St. Ann's School — <i>Class 12 (CBSE)</i>	2022 78.2%
Nand Vidya Niketan — <i>Class 10 (CBSE)</i>	2020 89.2%

Achievements

Successfully executed and delivered a \$500+ client freelance project in 14 days, showcasing fast turnaround, real-world problem solving, and production-grade engineering.	Jan (2026)
